dict.md 12/25/2018

Dict 遍历

```
if key in dict.keys():
    print("判断 key 是否存在于键中")

if values in dict.values():
    print("判断 value 是否存在于值中")

if key, value in dict.item():
    print("判断 key, value 是否存于字典项中")
```

同样的,可以使用 for 遍历字典:

```
for key in dict:
    print("遍历键")
    for key in dict.key():
        print("也可以这样遍历")

for value in dict.values():
    print("遍历值")

for kv in dict.items():
    print("遍历字典项")

for key, value in dict.items():
    print("遍历字典键值")
    for (key, value) in dict.items():
        print("也可以这样遍历")
```

有待整理 Python 字典常用方法总结
